Summary

AI/ML Engineer with expertise in end-to-end machine learning pipelines, RAG architecture, and multi-agent AI workflows using Python, LangChain, and local LLMs. Proven ability to develop scalable, full-stack AI applications integrating NLP, computer vision, and API-driven automation to enhance enterprise operational efficiency.

Technical Skills

Languages: Python, JavaScript, HTML, CSS, SQL

AI/ML: Machine Learning, Deep Learning, CNN, NLP, RAG Architecture, Multi-Agent Systems, LangGraph, LangChain, LLMs (Ollama, Qwen, Llama3.2, GPT-4o-mini), FAISS, ChromaDB, Embeddings, sentence-transformers, MCP, Computer Vision, Predictive Modeling, ML Pipelines, Feature Engineering, Vector Databases

Web Development: React.js, Node.js, Express.js, FastAPI, Uvicorn, Streamlit, REST APIs

Tools & Frameworks: Git, Docker, Docker Compose, MLflow, Jupyter, Power BI, UiPath, n8n, Scikit-learn, Pandas, OpenCV, MediaPipe, TensorFlow, PostgreSQL, Slack SDK, Google Drive API, OAuth

Work Experience

Data Science Intern | Luminar Technolab | Kochi

Jul 2025 – Feb 2026

- Engineered ML pipelines and CNN-based computer vision models using Scikit-learn and TensorFlow, increasing predictive accuracy by 15%.
- Built interactive Power BI dashboards with complex DAX measures, driving a 20% improvement in executive decision-making efficiency.

RPA Developer | RISS Technologies | Kozhikode

Jun 2024 – Aug 2024

- Built UiPath RPA workflows for large-scale e-commerce web scraping and automated financial EMI report generation.
- Deployed automated email exception handling and logging systems, ensuring high process reliability and minimizing manual entry.

Education

BSc Computer Science | RSM SNDP Yogam Arts & Science College, Kozhikode

2022 – 2025

Certifications

Data Science – Python | NACTET, New Delhi | Grade: A+ | Luminar Technolab

Nov 2025

Projects

Multi-Agent Data Analysis Pipeline

May 2026

Python, LangGraph, LangChain, Llama3.2, FastAPI, Streamlit, Docker, MCP, Slack SDK, Google API, ChromaDB

- Orchestrated an end-to-end multi-agent AI pipeline (LangGraph, Llama 3.2) for automated data cleaning, anomaly detection, and reporting.
- Containerized a FastAPI backend via Docker, integrating MCP, Slack SDK, and Google APIs for AI-triggered analytical workflows.

AI-Powered Maintenance Decision Support System

Mar 2026

React, Node.js, PostgreSQL, FAISS, Qwen3.5:9b, LangChain, RAG

- Developed a full-stack predictive maintenance app (React, Node.js) with a 7-factor risk scoring engine for fleet equipment.
- Implemented a FAISS/Qwen3.5 RAG pipeline and feasibility engine to extract manual insights and evaluate technician readiness.

PDF RAG System – Semantic Document Retrieval Pipeline

May 2026

Python, LangChain, PyPDFLoader, sentence-transformers, ChromaDB, scikit-learn

- Built an automated RAG document ingestion pipeline utilizing PyPDFLoader, SentenceTransformers, and ChromaDB for sub-100ms semantic search.

Stage Decor – Event Decoration Gallery & Booking Platform

Apr 2026

React, FastAPI, Python, PostgreSQL, Cloudinary, JWT, Vercel

- Developed a full-stack booking platform (React, FastAPI, PostgreSQL) featuring a JWT-secured admin panel, category filtering, and scalable Vercel deployment.

Technical Analyst Agent – AI Telegram Bot

Apr 2026

n8n, OpenRouter, GPT-4o-mini, LangChain, Telegram API

- Built an n8n-powered Telegram bot integrating GPT-4o-mini vision capabilities to autonomously analyze stock charts and technical indicators.

Python, Jupyter, Scikit-learn, Pandas

- Engineered predictive models for employee attrition, cryptocurrency forecasting, and job market clustering using advanced ensemble methods.
